Disclaimer

This document is only used to convey the information. The participants in the buying please carefully read the white paper and the official website of the relevant instructions and comprehensively understand the Blockchain and digital assets. Please notice the potential risks and thoroughly assess your risk tolerance and situation to make rational decisions.

The information contained in this Whitepaper is for general understanding purposes only. This Whitepaper is for discussion and presentation purposes only. The proposed blockchain platform does not guarantee the accuracy of the conclusions reached in this Whitepaper.

Nothing in this White Paper shall be deemed to constitute a prospectus of any sort or a solicitation for investment, nor does it in any way pertain to an offering or a solicitation of an offer to buy any securities in any jurisdiction. This document is not composed and is not subject to any jurisdiction laws or regulations designed to protect investors.

Certain statements in this Whitepaper constitute "forward-looking statements" that are used on the beliefs of the Company and reflect their current expectations. Such statements reflect the Company's views at the time the statements are made concerning future events based on information available at that time, and they are subject to risks and uncertainties that could cause actual results to differ materially from those contemplated in those forward-looking statements. The Company assumes no obligation to update or revise these statements to reflect current information, events, or circumstances, including changes in any risks or uncertainties that may impact them.

Abstract

Digital currency is becoming more acceptable as a form of payment in financial transactions; many organizations are exploring ways to record traditional forms of assets, such as commercial bills and loyalty points, into blockchains, usually in the form of consortium chains. The adoption of cryptocurrencies will impact the way we want our future to look.

GreenWorld is poised to play a leading role in this new era of charity platforms. With the latest features of blockchain and with help of our community, GreenWorld is aiming to create a moderate platform for both trading and a transparent charity platform that will work with international platforms.

Problem

Deforestation

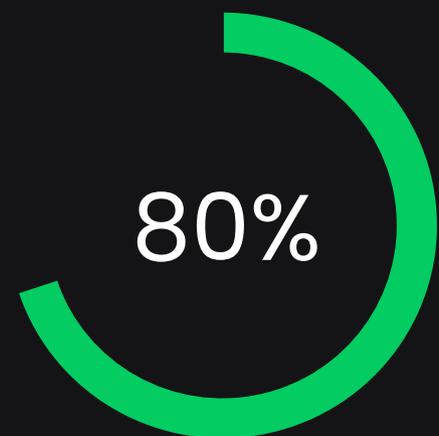

Trees will undoubtedly play a vital role as the world limits climate change, protects wildlife, and provides food for billions of people. Despite this, deforestation is not stopping. Forests still cover around 30% of the world's land surface, but they rapidly disappear. According to the United Nations Food and Agriculture Organization, the globe has lost 420 million hectares (about a billion acres) of forest since 1990, primarily in Africa and South America. Deforestation is causing global temperature rise, shrinking ice sheets, rising sea levels, and causing extreme events.

Our planet faces severe environmental challenges caused by deforestation and biomass loss. About 36 football fields' worth of trees is lost every minute due to deforestation. Forests are home to more than 80 percent of all terrestrial animals, plants, and insects. Between 1970 and 2014, populations of mammals, birds, reptiles, amphibians, and fish around the globe dropped 60 percent.

Water Pollution

If we talk about the water and its life inside the number are like bombs. Even though there is 70% water surrounding our land but all of it is not usable in raw form for humans there is also life inside the water. 80% of the world's wastewater returns to the environment untreated, which causes massive pollutants. 70% of Industrial Waste in Developing Countries Is Disposed of in Untreated Waters. Unsafe drinking water and poor sanitation in Africa cause 115 deaths an hour. Half of the Chinese population doesn't have access to safe water. 80% of India's water is polluted. 844 million people don't have access to a clean water source.

world's wastewater

These numbers are not slowing down. They are increasing day by day and we humans with our hands are killing our planet. We need to stop this we need to step up and bring a change.

About Greenworld

Fighting against global warming can be both sustainable and ethical, but for this to occur, it must be performed with a focus on long-term results rather than quick profits. The whole world has fallen victim to wide-scale global warming that has not been followed by the commensurate act which can stop or even slow down global warming.

GreenWorld Token is aiming to solve this problem with new and futuristic technology called Blockchain and at the same time benefit the people by providing a passive source of income. GreenWorld Token was built with one purpose - to build the best-decentralized technology available to the world while building mass adoption of cryptocurrency and making an equal impact on the environment at the same time.

GreenWorld is a blockchain-based system for dealing with crypto coins. It has a unique aim which is to save this planet from global warming. The small fraction of the transaction fee will be used for charities fighting global warming.

First time in the crypto market, someone has aimed to think about this noble act. It is a great cause apart from growing money as other digital currencies are doing. GreenWorld has presented such a unique idea first time in the crypto world and opened a door for others to develop such great ideas.

GreenWorld is a platform that connects the non-profit community by providing an ecosystem of services through an easy-to-use interface, allowing full transparency and traceability of donations.

The management believes that the underlying factor that will continue to define Blockchain products is giving people and businesses more power and control over their finances and environment. This is the driving force behind our project, i.e., providing a platform for people to use the Blockchain to transform their environment.

Greenworld Mission

At GreenWorld, we believe it's possible to solve global warming. Our optimism is fueled by groundbreaking blockchain, donations, and the power of community. Our organization has these three pillars which work in unison to help scale an effective fight against global warming. The blockchain program lays the foundation for a vision of the future that's possible. The donations work to direct resources to those who are helping this environment. The community is the backbone which is the most important of them all.

Greenworld Token

\$GWD will be the native currency. \$GWD will be used as currency in the GreenWorld ecosystem. By combining the power of blockchain and cryptocurrency, we created a token that is better than any other token available in the market. \$GWD is a BEP-20 Token that fosters and promotes the project's healthy and widespread usage and decentralization through fast, secure, and public transactions. Any trade in GreenWorld's ecosystem will be through \$GWD. Blockchain technology and the token economy enable GreenWorld to be the true community, incentive system, and community ownership.

Automatic Reward

Each holder of \$GWD is eligible to automatically receive a redistribution reward from the reward pool. The contract uses a portion of the tax applied to every buy transaction (1%) and sell transaction (4%) to do this. This can be beneficial in the following ways

- The more transactions are performed the big the award pool is going to be
- It also encourages the flow of tokens from one account to another
- It also provides benefits to users

Charity

Charitable focus is the most important cornerstone of the GreenWorld economy. Charitable focus is a fundamental value for many problems in our day-to-day lives that can be solved easily in a community environment. The GreenWorld team gives special attention to this. GreenWorld and its community will help each other to make this beautiful place to live. 2% of all buy transactions and 3% from sell transactions go towards charities to save the planet.

Benefits

BENEFIT TO USERS

The Binance Smart Chain provides efficient and effective control when there is any system failure, hijacking, or something like this problem comes. It provides more safe and secured trading for the users within a smart chain and outside that system. In decentralized platforms, end-users didn't need to contact the central body and they have no privacy or trust issues while in decentralized infrastructure hence their privacy is protected.

GreenWorld is also one of the examples of digital currencies and hence provides a better secured and safe system for trade and sustainable development. Additionally, it works for the betterment of the environment and hence plays a significant role in a clean environment without a negative impact on the community. Users can grow their money and grow their business together.

PUBLIC BENEFITS

GreenWorld is going to set an example for others to think about the betterment of the community and always be on the safe side with the development of the ecosystem which helps and saves the planet from global warming. GreenWorld will work with international organizations and charities working for the betterment of planet earth. This is the first digital currency that is thinking about public benefits.

Tokenomics

Token Name

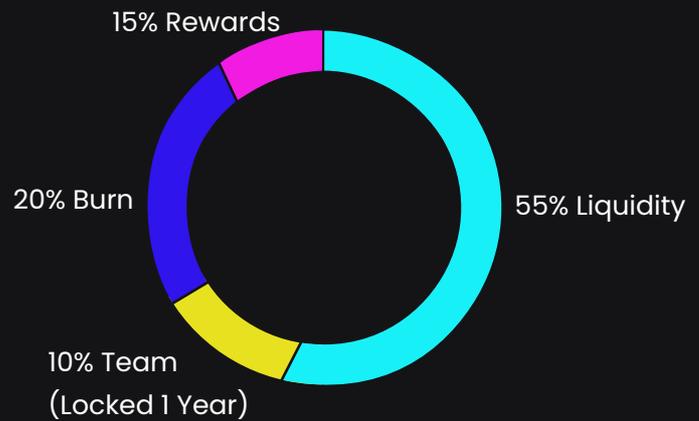

GWD Token

Total Supply

500 Million

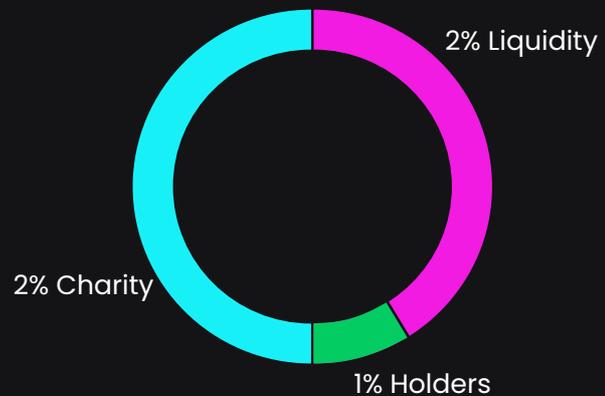

Token Distribution

- 55% Liquidity
- 20% Burn
- 15% Rewards
- 10% Team
(Locked 1 Year)

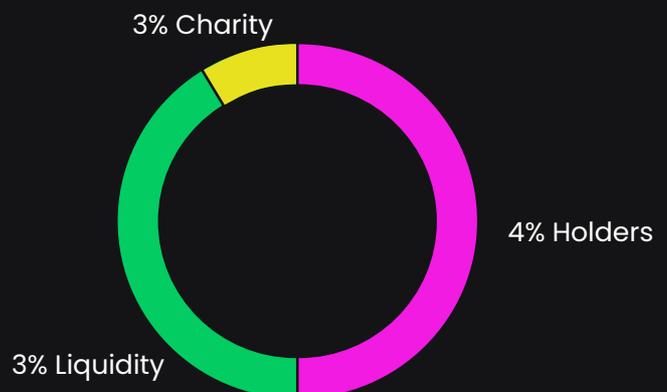

Buy Fee 5%

- 2% Liquidity
- 2% Charity
- 1% Holders

Sell Fee 10%

- 4% Holders
- 3% Charity
- 3% Liquidity

Roadmap

● Q2-2022

- *Marketing campaign*
- *Early holders airdrop*
- *Staking platform*
- *5% supply burn*

● Q3-2022

- *First GWD donation*
- *Big marketing campaign*
- *Exchange partnerships*
- *5% supply burn*

● Q4-2022

- *Under Construction*
